

Varitronics: Design System Questionnaire For System Contractors

Answering these questions will help in determining the software and hardware requirements of our light communication systems.

- 1) What type of practice is the system being designed for?
- 2) How many exam rooms are in the practice? What other locations require panels?
- 3) How many doctors are working simultaneously (at any one shift) at the practice?
- 4) Are they relegated to working particular rooms or can they work any rooms in the practice?
- 5) Do the doctors need to call for assistance?
- 6) Is a call light (Tech Sequence) needed for X-ray, Lab, Cast work, etc?
- 7) Do the doctors need to monitor the room status in their offices?
- 8) Does the doctor need to be alerted of phone calls when in exam rooms?
- 9) Are "Patient Arrive" lights needed to control patient flow from reception to the nurses' station(s)?
- 10) How many master panels are needed to monitor the entire system?
- 11) Are there any emergency stations needed in bathrooms, etc.? Is UL-1069 a requirement for the emergency stations?
- 12) Is an interoffice pager system required?
- 13) Are there any special requirements the system needs to handle?
